(54) Title: BIOACTIVE WHEY PROTEIN HYDROLYSATE

(57) Abstract

The invention relates to a partial hydrolysate of whey protein which contains bioactive peptides but does not have a bitter flavour. The hydrolysate is carried out using selective enzymes which produce the active peptides and is terminated at a degree of hydrolysis before substantial bitter flavours are created. There are also described novel peptides and a method of reducing systolic blood pressure through the administration of the peptides.
